Founded in 1989 by Mr. Nico De León and based in Richmond, Virginia, NXL provides construction management and surveying services for transportation projects in the United States and abroad. The firm has a dedicated staff of engineers, construction inspectors, land surveyors and technicians who are experienced, knowledgeable, and responsive. We take pride in our work and constantly strive to deliver the best product possible. When you are accountable for results, you can count on NXL to deliver success.

NXL is a certified Minority Owned Small Business (SWaM)

Services include:

Construction Management

- Construction Inspection
- Constructability Analysis
- Scheduling Analysis
- Claims Management Services

Surveying Services

- GPS Control and RTK Topographic Surveys
- Route Alignment—Topographic Surveys and Digital Terrain Modeling
- Railroad, Airport and Bridge Surveys
- Shoreline and Stream Restoration Surveys
- Construction Stakeout
- Planimetric, Utilities, Wetlands and Boring Locations
- AutoCAD, Microstation, GEOPAK, Eagle Point, CAiCe

NXL's construction management services include inspection and consultation on all phases of construction. Scope and project sizes range from inspection support on small rehabilitation projects to complete construction engineering and residency inspection of major transportation projects. We specialize in large transportation and marine projects, including state-of-the-art concrete segmental cable-stayed bridges and major road interchanges.

Construction Management

Surveying Services

NXL has been providing professional surveying services on preliminary engineering projects for over 20 years. NXL also works with other survey firms to provide supplemental capabilities on a wide variety of survey projects. NXL's licensed land surveyors use their expertise to assist clients in defining the scope of services required for projects. The NXL survey field crews are knowledgeable, flexible and able to respond to urgent situations on short notice. NXL's field crews are experienced in field data acquisition, using state-of-the-art methods. Field crews use Robotic Total Stations, Digital Data Collection, GPS and Remote Sensing Methods. From tidal wetlands to interstate highways, our crews have experience working under diverse environmental conditions, operating safely and efficiently. NXL's office staff includes survey and CADD technicians who are experienced with data reduction and base mapping to DOT standards.

NXL provides surveying, construction management and inspection services to clients with a level of quality, reliability and cost that exceeds their expectations. We will maintain the highest professional standards in all that we do and provide a work environment that encourages professional and personal development.
